

Grant Request: Pinewood Derby Timing & Software Upgrade for Cub Scout Pack 232

Dear Selkirk Community Fund Grant Committee,

On behalf of Cub Scout Pack 232, I am writing to request a grant of \$500 to upgrade the outdated timing and computer system used for our annual **Pinewood Derby**. While our physical track remains in good condition, the **laptop and software used to run the event have become unreliable**, creating significant challenges during our most recent derby.

The Pinewood Derby is more than just a race—it's an **entry point into engineering, physics, and data analysis** for our Scouts. Participants design, build, and refine their cars while learning core STEM concepts such as:

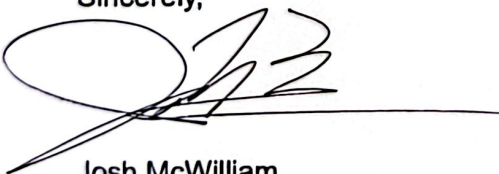

- **Aerodynamics**
- **Friction and weight distribution**
- **Measurement and precision**
- **Iterative design and testing**

Our current system struggles to accurately **track heat times, organize race brackets, and display real-time results**, limiting the educational and engagement potential of the event. With your support, we plan to purchase a **modern laptop and updated timing software** that will ensure accurate data tracking, smoother operation, and a more interactive STEM experience for our Scouts and their families.

This small but meaningful investment will have a long-lasting impact on our pack, allowing us to continue offering high-quality STEM-based programming that sparks curiosity, critical thinking, and a love of learning in our young participants.

Thank you for considering our request and for supporting hands-on STEM education in the community.

Sincerely,

A handwritten signature in black ink, appearing to read 'J McWilliam', with a long horizontal line extending from the end of the signature.
